## Contents

1	One	1
2	Two	2
3	Three	3
4	Four	4
5	Five	4
6	Six	5
7	Seven	6
8	Eight	6

## 1 One

1. *Given:*  $\forall x \in G, x^2 = e$  *Show:*  $G \in \mathbf{Ab}$
2. *Given:*  $|G| < \infty, |G| \equiv 0 \pmod{2}$  *Show:*  $\exists g \in G \ni o(g) = 2$
3. *Given:*  $G \in \mathbf{Ab}$  *Show:*  $T(G) \leq G$  (where  $T(G) = \{g \in G : |g| < \infty\}$ )
4. *Show:* Every finite group is finitely generated.
  - *Show:*  $\mathbb{Z}$  is finitely generated
  - *Show:*  $H \leq (\mathbb{Q}, +) \implies H$  is cyclic
  - *Show:*  $\mathbb{Q}$  is not finitely generated
5. *Show:*  $\mathbb{Q}/\mathbb{Z}$  has, for each coset, exactly one representative in  $[0, 1) \cap \mathbb{Q}$ 
  - *Show:* Every element of  $\mathbb{Q}/\mathbb{Z}$  has finite order.
  - *Show:* There are elements in  $\mathbb{Q}/\mathbb{Z}$  of arbitrarily large order.
  - *Show:*  $\mathbb{Q}/\mathbb{Z} = T(\mathbb{R}/\mathbb{Z})$
  - *Show:*  $\mathbb{Q}/\mathbb{Z} \cong \mathbb{C}^x$
6. *Given:*  $G/Z(G)$  is cyclic *Show:*  $G$  is abelian

7. *Given:*  $H \trianglelefteq G, K \trianglelefteq G, H \cap K = e$  *Show:*  $\forall h \in H, \forall k \in K, hk = kh$
8. *Given:*  $|G| < \infty, H \leq G, N \trianglelefteq G, (|H|, [G : N]) = 1$  *Show:*  $H \leq N$
9. *Given:*  $|G| < \infty, N \trianglelefteq G, (|N|, [G : N]) = 1$  *Show:*  $N$  is the unique subgroup of order  $|N|$

## 2 Two

1. *Given:* For every triplet in  $G$ , two elements commute *Show:*  $G$  is abelian
2. *Given:*  $H_1, H_2, H_3 \leq G, G = H_1 \cup H_2$  *Show:*  $G = H_1 \vee G = H_2$
3. *Given:*  $G = H_1 \cup H_2 \cup H_3, G$  finite *Show:*  $G = H_i \vee \forall i, [G : H_i] = 2$
4. *Show:* TFAE;  $\text{clos}(H)$  is:
  - The smallest normal subgroup of  $G$  containing  $H$ .
  - The subgroup generated by all conjugates of  $H$ .
  -

$$\bigcap_{H \leq N \trianglelefteq G} N$$

- $\phi : G \rightarrow -, \phi(H) = e$ , then  $\phi$  factors through  $G/\text{clos}(H)$
5. *Given:*  $H, K \trianglelefteq HK \leq G$  *Show:*

$$\frac{HK}{H \cap K} \cong \frac{HK}{H} \times \frac{HK}{K}$$

6. *Given:*  $H \leq G, N \trianglelefteq G, H \in \text{Hall}(G)$  *Show:*

$$H \cap N \in \text{Hall}(N) \wedge \frac{HN}{N} \in \text{Hall}\left(\frac{G}{N}\right)$$

7. *Given:*  $|G| = n, G$  cyclic,  $\sigma_i : G \rightarrow G \ni x \mapsto x^i$

- Show  $\sigma_i \in \text{End}(G)$
- Show  $\sigma_i \in \text{Aut}(G)$  iff  $(i, n) = 1$
- $\sigma_i = \sigma_j$  iff  $i = j \pmod n$
- $\tau \in \text{Aut}(G) \implies \exists i \ni \tau = \sigma_i$
- $\sigma_i \circ \sigma_j = \sigma_{ij}$

6. The map

$$\psi : Z_n^\times \rightarrow \text{Aut}(G) i \mapsto \sigma_i$$

is an isomorphism.

8. *Given:*  $G$  is cyclic *Show:*  $\text{Aut}(G)$  is abelian of order  $\phi(n)$
9. *Show:*  $D_\infty \cong \langle a, b \mid b^2 = e, ba = a^{-1}b \rangle$
10. *Show:*  $Q_8 \cong \langle a, b \mid a^2 = b^2, a^{-1}ba = b^{-1} \rangle$
11. *Show:*  $\langle x, y \mid xy^2 = y^3, yx^2 = x^3y \rangle = \langle e \rangle$

### 3 Three

1. *Given:*  $G \sim X$  transitively,  $H \trianglelefteq G$ 
  - *Show:*  $H \sim X$ , but possibly not transitively
  - *Show:*  $G$  acts transitively on  $\{\mathcal{O}_h : h \in H\}$
  - *Show:*  $\forall i, j, |\mathcal{O}_{h_i}| = |\mathcal{O}_{h_j}|$
  - *Given:*  $x \in \mathcal{O}_h$  *Show:*  $|\mathcal{O}_h| = |H : H \cap G_x|$
  - *Show:*  $|\{\mathcal{O}_h\}_{h \in H}| = [G : HG_x]$
2. *Given:*  $\mathcal{K}$  a conjugacy class in  $S_n$ ,  $\{\mathcal{O}_s : s \in S_n\}$  orbits of an  $A_n$ -action on  $S_n$  *Show:*  $\mathcal{K} = \mathcal{O}_s \vee \mathcal{K} = \mathcal{O}_{s_i} \cup \mathcal{O}_{s_j}$  *Show:* Case 2 occurs iff  $\{k_i\}$ , the cycle lengths in disjoint cycle form, are odd and distinct
3. i:  $|G| < \infty, H < G$ 
  - *Show:*  $\{gHg^{-1} : g \in G\} = [G : N_G(H)]$
  - *Show:*

$$G \neq \bigcup_{g \in G} gHg^{-1}$$

4. Prove Cauchy's Theorem. Given  $p \mid o(G) < \infty$

$$X = \left\{ (a_i)_{i=1}^p \in G^p \ni \prod_{i=1}^p a_i = e \right\}$$

- *Show:*  $(a_1 a_2 \cdots a_p) = e \implies (a_2 a_3 \cdots a_p a_1) = e$
  - *Show:*  $(Z_p, +) \sim X$  and  $\bar{1} \sim (a_1 a_2 \cdots a_p) = (a_2 a_3 \cdots a_p a_1)$
  - *Show:*  $|X| = |G|^{p-1}$
  - *Show:*  $\{\mathcal{O}_x : |\mathcal{O}_x| = 1\} > 1$  and  $\exists a \in G \ni a^p = e$
5. *Given:*  $G \sim X$ ,  $|G| < \infty$ ,  $1 < |X| < \infty$ 
    - *Show:*  $\exists g \in G \ni \forall x \in X, g \sim x \neq x$
    - *Show:* This holds if  $|G| = \infty$ , but not if  $|X| = \infty$  as well.
  6. *Given:*  $H \leq G$ . *Show:*  $\text{core}(H)$  is
    - The largest  $N \trianglelefteq G, N \subseteq H$
    - Generated by all normal subgroups contained in  $H$
    - Given by  $\bigcap_{g \in G} gHg^{-1}$
    - The kernel of  $G \sim \frac{G}{H} \ni x \sim gH = (xg)H$
  7. *Given:*  $[H : G] = n < \infty$ 
    - *Show:*  $[\text{core}(H) : G]$  divides  $n!$
    - *Show:*  $G$  simple  $\implies o(G) \mid n! \wedge |G| < \infty$
  8. *Given:*  $A_n$  is simple for  $n \geq 5$  *Show:*  $\nexists H \in A_n \ni [H : A_n] < n$  *Show:*  $\exists H [H : A_n] = n$
  9. *Given:*  $r$  beads of  $n$  colors *Show:* How many distinct circular bracelets can be made.

## 4 Four

1. *Given:*  $H \text{ char } G$  *Show:*  $H \trianglelefteq G$
2. *Given:*  $H \text{ char } K \trianglelefteq G$  *Show:*  $H \trianglelefteq G$
3. *Given:*  $K = \langle k \rangle \trianglelefteq G$  *Show:*  $H \leq K \implies H \trianglelefteq G$
4. *Show*  $H \trianglelefteq K \trianglelefteq G \not\implies H \trianglelefteq G$
5. *Given:*  $P \leq H \leq K \leq G < \infty, P \in \text{Syl}_p(G)$  *Show:*  $P, H \trianglelefteq K \implies P \trianglelefteq K$
6. *Show:*  $N_G(N_G(P)) = N_G(P)$
7. *Given:*  $\sigma \in \text{Aut}(G)$  *Show:*  $\sigma \text{Inn}(G) \sigma^{-1} = \text{Inn}(G)$  iff  $\forall g \in G, g^{-1} \sigma(g) \in Z(G)$
8. *Show:*  $\text{Inn}(G) \text{ char } \text{Aut}(G)$
9. *Given:*  $H \subseteq G, P \in \text{Syl}_p(G)$ 
  - *Show:*  $\exists g \in G \ni gPg^{-1} \in \text{Syl}_p(H)$
  - *Given:*  $H \trianglelefteq G$  *Show:*  $P \cap H \in \text{Syl}_p(H)$
  - *Given:*  $P \trianglelefteq G$  *Show:*  $P \cap H \in \text{Syl}_p(H)$  and  $|\text{Syl}_p(H)| = 1$
10. *Given:*  $|G| = pqr, p < q < r$  *Show:*  $\exists P_i \in \text{Syl}_i(G) \trianglelefteq G$
11. *Given:*  $|G| = 595$  *Show:* All sylow subgroups are normal
12. *Given:*  $|G| = p(p+1)$  *Show:*  $\exists N \trianglelefteq G$  where  $|N| = p$  or  $p+1$

## 5 Five

1. *Given:*  $G = H \rtimes_{\psi} K$

$$\psi : K \rightarrow \text{Aut}(H) k \mapsto \psi(k)$$

$$\theta \in \text{Aut}(H) \quad \rho : K \rightarrow K$$

$$\phi_{\theta} : \text{Aut}(H) \rightarrow \text{Aut}(H) \rho \mapsto \theta \circ \rho \circ \theta^{-1}$$

$$\psi_2 : K \rightarrow \text{Aut}(H) k \mapsto (\phi_{\theta} \circ \psi)(k)$$

$$\psi_3 : K \rightarrow \text{Aut}(H) k \mapsto (\psi \circ \rho)(k)$$

$$\text{Show: } H \rtimes_{\psi} K \cong H \rtimes_{\psi_2} K \cong H \rtimes_{\psi_3} K$$

2. Classify groups of order  $pq, p < q, p \mid q-1$
3. Classify groups of order 20.
4. Classify groups of order 75.
5. *Show:*  $|G| < 60 \implies G$  is not simple.
6. *Show:*  $|G| < 60 \implies G$  is solvable
7. *Given:*  $|G| < \infty, H \leq G$  maximal  $\implies [G : H] = p$ , a prime. *Show:*  $|G|$  is solvable
  - *Given:*  $P \in \text{Syl}_p(G) \wedge \exists H \ni N_G(P) \leq H \leq G$  *Show:*  $[G : H] = 1 \pmod p$

- Given:  $p \mid o(G)$ , the largest such prime Show:  $\exists P \trianglelefteq G \in Syl_p(G)$ ,
8.  $|G| < \infty$
- Given:  $G$  is characteristically simple Show:  $\exists H$  (simple)  $\ni G \cong H^n$ . Show: Whether or not the converse holds
  - Given:  $N \trianglelefteq G$  minimal Show:  $N$  is characteristically simple,  $N \cong H^n$

## 6 Six

- Given:  $G$  is nilpotent Show:  $H \leq G \implies H, G/H$  are nilpotent
- Show:  $G/Z(G)$  is nilpotent  $\implies G$  is nilpotent
- Given:  $|G| < \infty$  Show:  $|G|$  is nilpotent iff  $a, b \in G, (a, b) = 1 \implies ab = ba$
- Show:  $D_{2n}$  is nilpotent iff  $n = 2^i$
- Given:  $|G| < \infty$ 
  - Show  $\Phi(G)$  char  $G$
  - Show  $\Phi(G)$  is nilpotent
  - Given:  $|P| = p^e$  Show:  $P/\Phi(P)$  is an elementary abelian  $p$ -group Show:  $N \trianglelefteq P, P/N$  is elementary abelian  $\implies \Phi(P) \subseteq N$
- Given:  $R$  a commutative ring,  $x, y \in R$  nilpotent
  - Show:  $x + y$  is nilpotent Show:  $\{x \in R : x \text{ is nilpotent}\} \trianglelefteq R$
  - Given:  $u \in R^\times, x \in R$  nilpotent Show:  $u + x \in R^\times$
  - Show: An counterexample to 1 when  $R$  is noncommutative.
- Given:  $R$  a commutative ring,  $R[[x]]$  its formal power series
  - Show:  $\sum_{i=0}^{\infty} a_i x^i \in R[[x]]^\times \iff a_0 \in R^\times$
  - Show:  $R$  a domain  $\implies R[[x]]$  a domain
  - Given:  $R$  a field Show:  $I = \{r \in R[[x]] : r_0 = 0\}$  is a maximal ideal of  $R[[x]]$  Show:  $I$  is the unique maximal ideal
- Given:  $R$  a commutative ring,  $G$  a finite group,  $RG$  a group ring.
  - Given:  $\mathcal{K} = \{k_1, k_2, \dots, k_m\}$  a conjugacy class in  $G$  Show:
 
$$K = \sum_{i=1}^m k_i \in RG \implies K \in Z(RG)$$
  - Given:  $\mathcal{K}_1 \dots \mathcal{K}_r$  distinct conjugacy classes in  $G$ ,  $K_i = \sum_j k_j \ni k_j \in \mathcal{K}_i$  Show:  $Z(RG) = \{\sum a_l K_l : \forall 1 \leq l \leq r, a_l \in R\}$  (All  $R$ -linear combinations of the  $\mathcal{K}_i$ )
- Given:  $R$  a ring,  $M_n(R)$  its matrix ring
  - Given:  $I \trianglelefteq R$  (two-sided) Show:  $M_n(I) \trianglelefteq M_n(R)$  Show:
 
$$\frac{M_n(R)}{M_n(I)} \cong M_n\left(\frac{R}{I}\right)$$
  - Show:  $\forall I_M \trianglelefteq M_n(R), I$  is of the form  $M_n(I)$  for some  $I \trianglelefteq R$  Show:  $R$  a division ring  $\implies M_n(R)$  is a simple ring.

**7 Seven**

**8 Eight**
