- Dimension 1: All elliptic curves (up to homeomorphism)

• Fake projective planes

• Calabi-Yau manifolds

• Conics

- Dimension 2: K3 surfaces
- Dimension 3 (threefolds): 500 million +, unknown if infinitely many
- The bananafold
- Hyperkähler
- Hurwitz schemes
- Topological galois groups, e.g.  $G(\overline{F}/F)$  for  $F = \mathbb{Q}, \mathbb{F}_p$ .
- Spec (R) for R a DVR (a Sierpinski space)
- Quiver Grassmannians
- Rigid analytic spaces
- Affine line with two origins
- Moduli stack of elliptic curves  $\mathcal{M}_{1,1}$ .
- Abelian Surface
- Fano Varieties
- Curves: isomorphic to  $\mathbb{P}^1$
- Surfaces: Del Pezzo surfaces
- Weighted projective space
- Toric Varieties
- Grassmannian
- Flag Varieties
- Moduli Spaces

Due to Kunihiko Kodaira's classification of complex surfaces, we know that any compact hyperkähler 4-manifold is either a K3 surface or a compact torus T^{4}. (Every Calabi–Yau manifold in 4 (real) dimensions is a hyperkähler manifold, because SU(2) is isomorphic to Sp(1).)

As was discovered by Beauville, the Hilbert scheme of k points on a compact hyperkähler 4-manifold is a hyperkähler manifold of dimension 4k. This gives rise to two series of compact examples: Hilbert schemes of points on a K3 surface and generalized Kummer varieties.

## 2 Analogies

Impossible goal: pick a category, understand all of the objects and all of the maps.

Manifolds: classified by geometric structure in low dimensions ( $\leq 4$ ), algebraic data/methods in high dimensions

- 2-manifolds: Uniformization
  - Simply connected Riemann surfaces are conformally equivalent to one of  $\mathbb{H}, \mathbb{D}^{\circ}, \mathbb{CP}^{1}$ .
- 3-manifolds: Thurston's Geometrization
  - Oriented prime 3-manifolds can be decomposed into geometric "pieces" of 8 possible types
  - Geometric structure: a diffeo  $M\cong \tilde{M}/\Gamma$  where  $\Gamma$  is a discrete Lie group acting freely/transitively on X
- 4-manifolds: classified in the topological category by surgery, but not in the smooth category
- n-manifolds,  $n \geq 5$ : classified by surgery
