Summary/Outline

Outline

What we're trying to prove:

– 8.1.5: $(d\mathcal{F})_u$ is a Fredholm operator of index $\mu(x) - \mu(y)$.

What we have so far:

– Define

$$L : W^{1,p}\left(\mathbb{R} \times S^1; \mathbb{R}^{2n}\right) \longrightarrow L^p\left(\mathbb{R} \times S^1; \mathbb{R}^{2n}\right)$$
$$Y \longmapsto \frac{\partial Y}{\partial s} + J_0 \frac{\partial Y}{\partial t} + S(s,t)Y$$

where

$$S : \mathbb{R} \times S^1 \longrightarrow \mathrm{Mat}(2n; \mathbb{R})$$
$$S(s,t) \overset{s \longrightarrow \pm\infty}{\longrightarrow} S^\pm(t).$$

Summary/Outline

8.8.3: Ind(L_1) $= k^- - k^+$
○○○○○

Outline

- Took $R^\pm : I \longrightarrow \mathrm{Sp}(2n; \mathbb{R})$: symplectic paths associated to $S^\pm$

- These paths defined $\mu(x), \mu(y)$
- Section 8.7:

  $$R^\pm \in \mathcal{S} := \left\{ R(t) \ \middle| \ R(0) = \mathrm{id}, \ \det(R(1) - \mathrm{id}) \neq 0 \right\} \implies L \text{ is Fredholm.}$$

- WTS 8.8.1:

  $$\mathrm{Ind}(L) \overset{\mathrm{Thm?}}{=} \mu(R^-(t)) - \mu(R^+(t)) = \mu(x) - \mu(y).$$

Summary/Outline
○○○●○

8.8.5: dim ker F, F^*
○○○○○

8.8.3: $\text{Ind}(L_1) = k^- - k^+$
○○○○○

From Yesterday

- Han proved 8.8.2 and 8.8.4.
    - So we know $\text{Ind}(L) = \text{Ind}(L_1)$
- Today: 8.8.5 and 8.8.3:
    - Computing $\text{Ind}(L_1)$ by computing kernels.

8.8.4: $\text{Ind}(L_0) = \text{Ind}(L)$

8.8.5: dim ker F, F^*

8.8.2: $\text{Ind}(L_1) = \text{Ind}(L)$

8.8.3: $\text{Ind}(L_1) = k^- - k^+$

8.8.1: $\text{Ind}(L) = k^- - k^+ = \mu(x) - \mu(y)$

Summary/Outline
○○○○●

8.8.5: dim ker F, F^*
○○○○○

8.8.3: Ind$(L_1) = k^- - k^+$
○○○○○

Outline

- In the book: computes index assuming kernel computation first
- We'll try computing the kernel first, then using that to determine the index

8.8.5: dim ker F, F^*
00000

8.8.3: $\mathrm{Ind}(L_1) = k^- - k^+$
00000

Setup

Used in the proof of 8.8.3, $\mathrm{Ind}(L_1) = k^- - k^+$.

Setup:

We have

$$J_0^1 := \begin{bmatrix} 0 & -1 \\ 1 & 0 \end{bmatrix} \implies J_0 = \begin{bmatrix} J_0^1 & & & \\ & J_0^1 & & \\ & & \ddots & \\ & & & J_0^1 \end{bmatrix} \in \bigoplus_{i=1}^n \mathrm{Mat}(2; \mathbb{R}).$$
