Prologue

0.1 References

- Gathmann's Algebraic Geometry notes[@AndreasGathmann515].

0.2 Notation

- If a property P is said to hold **locally**, this means that for every point p there is a neighborhood $U_p \ni p$ such that P holds on U_p.

Notation	Definition
$k[\mathbf{x}] = k[x_1, \cdots, x_n]$	Polynomial ring in n indeterminates
$k(\mathbf{x}) = k(x_1, \cdots, x_n)$	Rational function field in n indeterminates
$\mathcal{U} \rightrightarrows X$	An open cover $\mathcal{U} = \left\{ U_j \mid j \in J \right\}$
Δ_X	The diagonal $\left\{ (x,x) \mid x \in X \right\} \subseteq X \times X$
$\mathbb{A}^n_{/k}$	Affine n-space
	$\mathbb{A}^n_{/k} := \left\{ \mathbf{a} = [a_1, \cdots, a_n] \mid a_j \in k \right\}$
$\mathbb{P}^n_{/k}$	Projective n-space

$\mathbb{P}^n_{/k} := (k^n \setminus \{0\}) / x \sim \lambda x \mid = \left\{ f(\mathbf{x}) = p(\mathbf{x})/q(\mathbf{x}), \mid p, q, \in k[x_1, \cdots, x_n] \right\} \mid +$ ───────
─────── $+$ ──────────── $\mid \mid V(J), V_a(J) \mid$ Variety associated to an ideal $J \trianglelefteq k[x_1, \cdots, x_n]$
$\mid +$ ─────────── $+$ ─────────── $\mid \mid - \mid := \left\{ \mathbf{x} \in \mathbb{A}^n \mid f(\mathbf{x}) = 0, \forall f \in J \right\}$
$\mid$

Fruit	Advantages
Bananas	built-in wrapper
	bright color
Oranges	cures scurvy
	tasty

0.3 Summary of Important Concepts

- What is an affine variety?
- What is the coordinate ring of an affine variety?

- What are the constructions $V(\cdot)$ and $I(\cdot)$?
- What is the Nullstellensatz?
- What are the definitions and some examples of:

  - The Zariski topology?
  - Irreducibility?
  - Connectedness?
  - Dimension?

- What is the definition of a presheaf?

  - What are some examples and counterexamples?

- What is the definition of sheaf?

  - What are some examples?
  - What are some presheaves that are not sheaves?

- What is the definition of $\mathcal{O}_X$, the sheaf of regular functions?

  - How does one compute $\mathcal{O}_X$ for $X = D(f)$ a distinguished open?

- What is a morphism between two affine varieties?
- What is the definition of separatedness?

  - What are some examples of spaces that are and are not separated?

- What is a projective space?
- What is a projective variety?
- What is the projective coordinate ring?
- How does one take the closure of an affine variety X in projective space?
- What is completeness?

  - What are some examples and counterexamples of complete spaces?

0.4 Useful Examples

0.4.1 Varieties

- $V(xy - 1) \subseteq \mathbb{A}^2$ a hyperbola
- $V(x)$ a coordinate axis
- $V(x - p)$ a point.

0.4.2 Presheaves / Sheaves

- $C^\infty(\,\cdot\,, \mathbb{R})$, a sheaf of smooth functions
- $C^0(\,\cdot\,, \mathbb{R})$, a sheaf of continuous functions
- $\mathcal{O}_X(\,\cdot\,)$, the sheaf of regular functions on X
- $\underline{\mathbb{R}}(\,\cdot\,)$, the constant sheaf associated to $\mathbb{R}$ (locally constant real-valued functions)
- $\mathrm{Hol}(\,\cdot\,, \mathbb{C})$, a sheaf of holomorphic functions
- K_p the skyscraper sheaf:

$$K_p(U) \coloneqq \begin{cases} k & p \in U \\ 0 & \text{else.} \end{cases}$$

0.5 The Algebra-Geometry Dictionary

Let $k = \bar{k}$, we're setting up correspondences

Algebra	Geometry
$k[x_1, \cdots, x_n]$	$\mathbb{A}^n_{/k}$
Maximal ideals $\mathfrak{m} = x_1 - p_1, \cdots, x_n - p_n$	Points $[a_1, \cdots, a_n]$
Radical ideals $J = \sqrt{J} \trianglelefteq k[x_1, \cdots, x_n]$	$V(J)$ the zero locus
Prime ideals $\mathfrak{p} \in \mathrm{Spec}(k[x_1, \cdots, x_n])$	Irreducible subsets
$I(S)$ the ideal of a set	$S \subseteq \mathbb{A}^n$ a subset
$I + J$	$V(I) \cap V(J)$
$\sqrt{I(V) + I(W)}$	$V \cap W$
$I \cap J, IJ$	$V(I) \cup V(J)$
$I(V) \cap I(W), \sqrt{I(V)I(W)}$	$V \cup W$
$I(V) : I(W)$	$\overline{V \setminus W}$
$k[x_1, \cdots, x_n]/I(X)$	$A(X)$ (Functions on X)
$A(X)$ a domain	X is irreducible
$A(X)$ indecomposable	X is connected
Krull dimension n (chaints of primes)	Topological dimension n (chains of irreducibles)
